THE CRYPTO CHALLENGE CONTEST

ZODIAC CIPHER

Author: Mark Stamp

July 2010

Challenge

The Zodiac cipher is a homophonic substitution cipher. In the late 1960s, a serial killer used it to encrypt messages to the police and to the press.

Find the correct substitution of the numbers 1 to 65 in our example (Zodiac.txt). The wanted solution are 65 letters written without spaces.

HINT: The plaintext is in English and uses only the 26 letters of the alphabet without any spaces or punctuation.
