

# MysteryTwister C3

THE CRYPTO CHALLENGE CONTEST

## AN INVISIBLE MESSAGE

Author: Viktor Veselovsky

October 2011

You received an email from your friend.

Here is a piece of it:

"...Attached is a text file mtc3-veselovsky-08-inv.txt which was written with a simple text editor. Each character is represented by a unique sequence of keystrokes. The length of a sequence is same for every character. Find two consecutive words ending in letter "T" and send them to me separated by one space as a verification that you were able to decode my message..."

You know that your friend is fluent in writing messages in Morse code, so it was not a surprise for you that he can write such a type of message, but what was more surprising is that when you opened the inv.txt file you could only see a blank window. You wonder whether your friend has sent you the wrong file or whether there is something which cannot be seen by eyes...
